## Apéndice A

## Presupuesto

En este anexo se realiza el cálculo del presupuesto que ha sido necesario para la realización del proyecto.

#### Equipamiento utilizado:

- Ordenador portátil ASUS 2 con Sistema operativo "Windows 10" proporcionado por la Universidad Politécnica de Madrid.
- Tarjeta de sonido MOTU UltraLite-mk3 Hybrid.
- Amplificador de potencia Crown XLS 2002.
- Fuente dodecaédrica AVM DO-12.
- Micrófono ominidireccional AKG-CK92.
- Micrófono bidireccional AKG-CK94.
- Alargaderas y cableado necesario para el conexionado de los equipos.
- trípodes y sujecciones para los micrófonos.
- Micrófonos biaurales Roland CS-10EM.
- Grabadora portátil Yamaha pr7.
- Ordenador portátil con Sistema operativo "Debian". 12GB de memoria RAM. Procesador "Intel i5".
- Auriculares "Tascam TH-02".
- Software *Dirac*. Licencia proporcionada por la Universidad Politécnica de Madrid.
- Software Audacity. Editor de audio de código abierto.
- Software LibreOffice Calc. Programa de hojas de cálculo de código abierto.
- Software Setzer. Editor de lenguaje LaTeX de código abierto.
- Servicio de suscripción a bases de datos bibliográficas y de normativas. Suscripción proporcionada por la Universidad Politécnica de Madrid.

#### Horas de trabajo y personal utilizado:

El proyecto comenzó a realizarse a mediados de 2021 y ha requerido de una dedicación parcial hasta finales del año 2021. La mayoría del tiempo invertido ha sido de forma individual (con el apoyo del tutor académico). No obstante, han existido momentos en los que se ha precisado de personal adicional. Concretamente, estos momentos han sido las tomas de datos donde, durante un total de tres días, se ha requerido de la presencia de tres personas en el auditorio (es decir, dos personales adicionales). Estas personas se trataban de un profesor de la Universidad Politécnica de Madrid y una estudiante de doctorado.

Para la realización de los test subjetivos de audio se invirtieron un total de 20 días en jornadas de 8 horas. Los participantes del test fueron voluntarios, por lo que no suponen de un coste adicional dentro del proyecto. Durante la realización de los test había una persona encargada de solucionar cualquier problema que pudiera aparecer, resolver dudas a los participantes y encargarse de las tareas de limpieza y desinfección del material.

Por último, el análisis de los resultados de los dos test ha requerido del trabajo de una persona en durante 14 días. También ha sido necesaria alrededor de una 7 días para la revisión de los contenidos y la corrección de errores.

A lo largo de todo el proyecto se han realizado varias reuniones con el tutor académico para hacer revisiones, buscar soluciones para problemas que iban apareciendo, etc.

#### Costes del proyecto:

En la tabla A.1 se han representado los costes relacionados con la realización del proyecto. Los valores reflejados de muchos de los productos son estimaciones de su valor real. Lo mismo ocurre con la cuantía de las horas dedicadas y el valor por unidad de diferentes equipos. Todos los costes tienen incluidos sus impuestos asociados.

Elemento	Coste/ud	Unidades	Coste Total
Portátil, 12 GB RAM, Intel i5	800.00	2	1600.00
Licencia Windows 10	259.00	1	259.00
Licencia Debian	0.00	1	0.00
Licencicia software código abierto	0.00	3	0.00
Licencia software Dirac	450.00	1	450.00
Auriculares TASCAM TH-02	30.00	1	30.00
Amplificador potencia Crown XLS 2002	585.00	1	585.00
Micrófono ominidireccional AKG-CK92	180.00	1	180.00
Micrófono bidireccional AKG-CK94	440.85	1	440.85
Tarjeta de sonido MOTU UltraLite-mk3 Hybrid	410.00	1	410.00
Fuente dodecaédrica AVM DO-12		1	0.00
Alargaderas y cableado para conexionado de equipos	51.43	2	102.86
Trípodes y sujecciones para los micrófonos	35.00	1	35.00
Micrófonos biaurales Roland CS-10EM	99.99	1	99.99
Grabadora portátil Yamaha pr7	663.35	1	663.35
Suscripción a artículos o norma	27.00	50	1350.00
Hora de trabajo Ing. Junior	9.75	268	2613.00
Hora de trabajo Ing. Senior x2	12.50	90	1125.00
Alquiler auditorio ETSIST UPM		1	0.00
Alquiler laboratorio CITSEM		1	0.00
-	-	Total	9944.05

Cuadro A.1: Tabla de costes del proyecto.

## Apéndice B

# Tabla A.1 de la norma UNE-EN ISO 10399

Cuadro F.1: Resultados obtenidos del test previo.

Las dos primeras columnas muestran el nombre de los dos archivos de audio de donde se puede extraer la posición. Los números detrás de las letras "F" y "B" marcan el número de fila y de butaca, respectivamente. La columna "Respuesta" marca "0" si se seleccionó que ambos audios eran diferentes y "1" si se seleccionó que eran iguales. La columna "Seguridad" determina el nivel de seguridad marcado en la respuesta: "1" si se está seguro, "0" si no.

#### F.2. Resultados del test final

Cuadro F.2: Resultados obtenidos del test final.

Al igual que en con los resultados del test previo, las dos primeras columnas muestran el nombre de los dos archivos de audio de donde se puede extraer su posición. Los números detrás de las letras "F" y "B" marcan el número de fila y de butaca, respectivamente. La columna "Respuesta" marca "0" si se seleccionó que ambos audios eran diferentes y "1" si se seleccionó que eran iguales. La columna "Seguridad" determina el nivel de seguridad marcado en la respuesta: "1" si se está seguro, "0" si no. "D.Fila" muestra la distancia, en metros, entre las filas de los dos audios. "D.Butacas" arroja el mismo valor, pero entre la distancia del número de butaca. "Distancia" es la distancia entre ambas posiciones. "D.fte X" y "D.fte Y" son las distancias, en coordenada "X" e "Y", respectivamente, de la posición intermedia entre ambas posiciones de butacas respecto de la fuete.
